Site Evaluation and Environmental Assessment

- Does the site pose an electrical hazard due to standing water around or near electrical outlets?
- Prior to placement, did you inspect for rocks or other objects that could puncture the tank bottom?
- Is the site near a road or field entry point where it could be an obstacle or hazard to equipment or vehicles?
- Are there any obstacles that must clear the equipment, such as a center pivot tower or pivot trusses?
- Does tank placement restrict access to control panels, screen cleaners, filters, or valves?
- Are sensitive areas located next to or near the injection site that might require relocating the equipment?
 - ✓ Well, river, stream, irrigation ditch, drainage ditch, wasteway, or other off-farm water body
 - ✓ House, school, hospital, day care facility, or other occupied building or structure
 - ✓ Park, walkway, or public roadway

Tank Placement and Preparation

- Did you inspect the tank for holes or cracks?
- Is the lid secured to or otherwise accompanying the tank?
- Were the site tubes and elbow joints examined for security and soundness?
- Are the shutoff valves intact and operational?
- Is the tank filter in-place and is the screen of the appropriate mesh?
- Are the hoses, fittings, clamps, and fasteners secured and were they checked for tightness?
- Is the tank located at least 20 feet away and down gradient from a water source, excluding a head ditch?
- Is the tank placed away from ditches or drop-offs and outside of irrigation district or road rights-of-way?
- Is the ground under the tank stable, thereby preventing excessive tilting or the possibility of tipping?
- Does the tank have proper identification in a contrasting background color that is at least 2-inches in height?
 - ✓ Contact name ✓ Identifier unique to each tank
 - ✓ Phone number ✓ Maximum capacity (usually molded into the tank)
- Does the proper product information appear on the tank?
 - ✓ Chemigation: full pesticide label and, if necessary, the EPA Establishment Number (container label)
 - ✓ Fertigation: list of primary content(s)
- Did you place the tank so that the identification information is visible from the field edge or an access road?

Injection Equipment

- Is the correct plug in the pump? Is the pump positioned out of the way and is it clearly visible?
- Is the injection point located at least 10 feet away from a sensitive area, such as a wellhead or overflow?
- Is the feed hose from the tank sound and securely attached to the tank and to the pump?
- Is the chemigation line check valve compatible with the product, with at least a 10 psi spring?
- For Commercial Applications: Does injection unit have a WSDA license plate with a current year tag?
